The analysis is undertaken of the ways the requirements for the results of the main syllabi mastering are formulated, namely the ones aiming at the development of the students’ general cultural competency.
Keywords: federal state educational standards for higher vocational training, competency-based approach; educational result; general cultural competency

Vavilova L., Maslennikov P.
To the issue of individualization of the learning process in the aspect of forming a professional identity
The levels of professional identity. A pedagogical technology of increasing the effectiveness of education
Keywords: professionally oriented tasks; the effectiveness of the learning process; intensification of training; professional identity

Samsonova N., Potmenskaya E.
National Policy in the field of talent management in Russia
The investigation of the matter of new talent support network in the Russian Federation. Analysis of strategic and program regulatory documents, which reflects the national policy in the field of new talent support
Keywords: talent; talent management; national policy
Bezuglaya T.  
*Development of foreign and domestic psychological knowledge at the turn of the XIX-XX centuries*

The article examines foreign and domestic psychological theories and concepts of the mid-19th and 20th centuries, which influenced the development of modern psychology and pedagogy in Russia.

Keywords: evolutionary theory; heredity; psychophysics, psychophysiology; associationism; antihomeostatism; behaviorism; behavioral science; pedology; activity concept; personal concepts

**Bogdanov S., Vyatkina L.**

*Professional skills education managers*

The article is devoted to the study of the professional abilities of managers. The study identified the components of pedagogical abilities of managers and their relationship in the hypothetical model of pedagogical abilities.

Keywords: manager; teaching abilities; a hypothetical model; managers of educational organizations; the approach; the theory of integral individuality

**Ermakovitch S.**

*The theory of intergroup relations and social change*

The article touches upon the issue of social groups self-identification depending on their social status, strategies of changing negative image in connection with gender-dependent communication style.

Keywords: gender; social group; social status; stereotype; communication style; interpersonal relationships

**Moskvina A., Tretyakov A.**

*Innovative mechanism of organization of legal education of schoolchild’s in modern pedagogical theory and educational practice*

Annotation. In this article, researchers attempt to highlight the author’s innovative mechanism for organizing the legal education of students in the conditions of a modern general education organization - the school center for legal information. On the basis of the results of a large-scale survey, among all participants in the educational relations of the general education organizations of St. Petersburg and Vilyui Novgorod, a conclusion was drawn on the need to create a separate structural unit in a modern school that would represent a comprehensive mechanism for the formation of legal education for students of a new era. The program of classes on legal education of students among 9-11 classes is described, its planned results are reflected. Particular attention is paid to modern requirements for graduates of general education organizations. A significant place in the article is given to the communication structure of the school center of legal information. In conclusion, some generalizing conclusions on the problem are presented.

Keywords: legal education; innovative mechanism; formation; all participants of educational relations; general educational organization; research; school center of legal information

**Potmenskaya E.**

*The theoretical aspects of talent management research*

The research of human talent management. The analyze of the basic concepts and theories of the human and personal development. The description of conceptual ideas and new talent management benchmarks.

Keywords: talent; talent management; human potential
Toropov P.
The result of pedagogical experiment: social assistance as the technology of pro-social education
Some results of theoretical research and experimental introduction of technology of forming competence in proaically cooperation at the school and university level are considered. The planned, predicted and unforeseen consequences of the pedagogical experiment are singled out. Attention is drawn to the socio-physiological factors (pregnancy and childcare), social factors (relationships of students with teachers and parents) and individual (interests, priorities, social circle) factors that influence the effectiveness of pedagogical influence and possible problems for participants in the course of its implementation. In particular, it is concluded that the micro society and some teachers are not ready to raise the level of proaically cooperation for students, increase conflict, polarize opinions and globalize the goals of values of respondents and participants in the experimental groups.
Keywords: proaically education; social assistance; civil activity; consequences of pedagogical experiment

Vlasova E., Ivanova E., Sysoeva A.
Infographics as a tool for the professional training of a modern teacher
In the article, infographics are considered as an innovative tool and promising technology for the professional training of a modern teacher
Keywords: visualization; infographics; master's program; professional training

Pugachev I., Varlamova I., Budilceva M.
Linguistic-oriented pronunciation teaching of foreign students in the intermediate stage
The article describes the problems of teaching foreign student’s Russian pronunciation. The necessity of using a linguistic-oriented methodology for teaching pronunciation is affirmed on the basis of the analysis of phonetic interference errors of foreign students of the intermediate stage. The results of the study can serve for development of the appropriate remedial courses and manuals
Keywords: teaching phonetics; auditory and pronunciation skills; interference; comparative analysis of languages; linguistic-oriented methodology

Rudinsky I., Abdulhamid T.
Experimental research of efficiency of the application of asr-technology in foreign language learning classes
The results of the pedagogical experiment on the application of the technology of automatic speech recognition for the formation of the speech skills of students during the study of English as a foreign language are analyzed
Keywords: pedagogical experiment; foreign language learning; automatic speech recognition; effectiveness

Dzhanhuvatova Z.
Use of web quests in the teaching of the humanities as a means of assessing the formation of educational competences of students
The article considers the influence of modern information technologies on the delivery of practical training and justifies the relevance of using the web-quest technology in the educational process
Keywords: design technologies; web quest; competence approach; human sciences; educational process
Sokolova I.
Creating ecological passport as an important stage of preparation for engineering and technical personnel of engineering production in a technical college
The development of an environmental passport of a machine building enterprise is one of the methods of forming knowledge about the negative consequences of production, their monitoring, and methods for leveling damage. The innovative pedagogical method of projects will allow students to receive special skills and skills for creating a document that establishes the relationship of the enterprise with the environment.
Keywords: production ecologization; environmentally transparent information; ecological rating; ecological passport; project method

Chelnokova E., Salimova I., Terekhina A.
Independent work of students as a basis of the educational process
The author of the article turns to the issue of independent work of students in higher education. The reasons for the activation of independent work are indicated and its components are singled out. Denoting the goals of independent work, the authors determine the main characteristics of this type of activity. The authors call the principle of individualization of learning the basis for the development of independence and creative activity. The didactic principles of organization are singled out and the conditions for the effectiveness of independent work are indicated. The authors pay attention to the consideration of the importance of controlling independent work as a way to verify the effectiveness of independent work. The authors believe that in the organization of independent work, it is important to form a motivation for this type of activity and designate the motivation factors for independent work of students.
Keywords: individualization of education; independent work; goals; characteristics of independent work; the principle of individualization of teaching; didactic principles; types of control; conditions of effectiveness; factors of motivation

Artystcheva E., Piskun D.
The self-control and correction of knowledge of the theme «graphs» with application of graphoanalyzator and mathcad in complex
The article outlines the problems of teaching of the section "Graph operations". The authors of the article are developed the converter of matrix from a text file to the file of Graphoanalyzator. This software, the additional MathCAD functions for operations on graphs, MathCAD and Graphoanalyzator in complex are used for self-control and correction of knowledge of the theme "Graphs".
Keywords: operations over graphs; self-control of knowledge; knowledge correction; matrix converter; MathCAD; Graphoanalyzator

Aghazadeh Sh.M.
The systematic course of learning mechanisms in the course of geometry (X-XI classes)
In this regard, the teaching of mathematics the certainty and manner of Geometry content line is the main object. From past till present it has been reflected debates about examining factors which studying with the gradual steps. Even more importantly, in contrast to the subject it has been discussed about the curriculum from specific to general, the review of certain aspects of an issue and the positive and negative aspects of Euclidean plane. At the end of the article, the same problem is illustrated by the linearity of the content of algebra and geometry, and also by the connection. This is useful for high school and secondary school teachers in the future education system.
Keywords: SPS (Special pedagogy of science); ICT (International Communication Technology); 10-11 classes; transforming geometry
Mukhina S., Skorobogatykh E.
Mathematical Olympiad as an element of the system extracurricular work of students of technical universities
The article discusses the possibilities of mathematical Olympiad as an element of extracurricular activities of students in solving the problem of identifying students capable of creative thinking and enhancing their cognitive activity. The features of mathematical Olympiad in technical high school, its goals, selection criteria and methods of evaluation of participants.
Keywords: mathematical Olympiad; extracurricular work of students; Olympiad problem; criteria of selection of tasks for mathematical Olympiad in technical high school; estimation technique

Serykh A., Kapalygina I.
Competence of the health of students in the information and educational space
The article reveals the problems of the competence of the health of the schoolchildren in the conditions of the information and educational space. Information security in the field of education is a special area that requires due attention from educators and psychologists. School age is the most favorable for education and upbringing and the most vulnerable in the context of psychological insecurity from all kinds of information that is acquired by the students themselves from various sources. Special training, the formation of the necessary competencies allows the student to obtain real access to information resources and cultural values, as well as to determine the degree of safety and usefulness of information, to identify safety criteria and assess information. Therefore, the issues of the competence of schoolchildren in the field of information security and media health should be included in the field of activity of teachers and parents.
Keywords: competence of health saving; information and educational space; schoolchildren; information security; communicative knowledge; socially significant skills; healthy speech environment

Agaev N., Chelnokova E., Frolova N.
Innovative technologies in pedagogical activity on formation of physical culture of students
The choice of the research topic is related to the increased interest in public health problems. The authors point out that today more than ever human health is the most urgent problem of many branches of knowledge, among which a special place belongs to pedagogical science. Due to the fact that modern conditions for the development of society make high demands on the health and working capacity of the population, particularly the younger generation, the state, according to the authors, should create all necessary conditions for preserving the health resources of student youth, primarily through the development of physical culture. The task of forming high working capacity, sustainable health, creative longevity is a priority for teachers of the departments of physical education and sport, the solution of which is directly related to the use of modern innovative technologies. In the article the authors turn to the consideration of concepts technology, innovation, innovative technologies. The main directions and objects of innovative transformations in the pedagogics of physical culture and sports are considered. The tasks of applying innovative technologies are determined. Examples are given of the use of innovative technologies that significantly enhance the effectiveness of the process of physical education of students.
Keywords: healthy behavior; physical culture; physical education; students; technology; innovation; innovative technologies; teacher's innovative activity
Danilenkova V.
*Formation of funds for assessment tools for ecology in conditions of greening of education*
The rating level of knowledge of ecology allows to increase quality of ecological training of students.
Ecological educational environment; complex tasks; level of assimilation of ecological knowledge

Starovoit N.
*The pedagogue of inclusive school in the frames of professional requirements, scientific researches and practices*
The vertical of inclusion is built from normative documents to concrete activity of a pedagogue. For this reason, the problem of pedagogues’ readiness to inclusive education is the essential one. Normative requirements to personal qualities and professional competences of a pedagogue of inclusive school are presented in this article. Professional standard of the pedagogue includes these requirements. The most important ones are the readiness to accept different children and professional direction to help any child
Keywords: inclusive education; professional standard of the pedagogue; personal qualities and professional competences of the pedagogue of inclusive school; professional and psychological readiness to work in the conditions of inclusive education

Shirshova E., Osten V., Mamulevich A.
*The problem of realization of the circular method in the physical preparation of students*
The authors study problem of organization of physical preparation of students with the help of the method of circular training is considered. The requirements of the educational standard, the conditions of training, the features of the physical readiness of students, the methodological requirements for the application of circular training are compared
Keywords: physical education; students; physical training; circular training

Zaitsev A., Sokolov A., Nasonova N.
*Formation of professional competence of future fish farming engineers in production practice*
This article summarizes the experience of the industrial practice for future fish farmers-engineers at salmon factory. It is shown that the former professional competencies correspond to the requirements of the professional standard of a fish farmer. It is established that the professional competencies of the students are formed to the full and become the basis for mastering the labor functions of the fish farm engineer, but it does not fully comply with the requirements of the professional standard
Keywords: industrial practice; professional competence; labor functions; engineer-fish breeder

Lurie I.
*Conditions for increasing the motivation of the faculty of the university for quality educational and methodical work*
Different levels of motivation of the marine engineering university teachers for methodical work on the example of the mathematics course are considered
Keywords: motivation; professorial and teaching staff; educational process; statistical connections; methodical work

Krukovich N.
*Prognostic modeling in fishing as one of the components of professional education of marine engineers*
The prognostic model of the fishery population in a changing marine environment is considered. Numerical solution of the model is presented
Keywords: commercial populations; predictive models; fish stocks
Balyko S.
Laguna integrated trainers in the training system of ship calculations
The article describes the benefits of training cadets and crews of Navy ships to fulfil responsibilities suited to marine service.
Keywords: educational and training base; extreme situations; competence; commitment; specialist; management; professionalism; efficiency; integrated trainer

Almentev V., Puzikov O., Efimov V.
About necessity of formation of basics of confessional culture of courses of military institutions of the national guards Russian Federation
The article examines the need to form the foundations of confessional culture among the cadets of the military institutes of the National Guard troops in order to prevent anticonfessional conflicts in military collectives, taking into account the fact that the leadership of the military high school (head of the department for work with personnel, deputy head of the faculty for educational work) realizes the complexity and importance of the issue of distribution of cadets of different faiths into platoons and companies. One of the author’s positions is that the organization of work in this area will be more effective taking into account the special features of the cadets' adaptation to the new educational conditions, as well as future officers of the Russian National Guard troops who will have to fulfill military duty throughout the Russian Federation and formed the foundations of confessional culture will be useful in everyday activities.
Keywords: anticonfessional culture; upbringing; educational process; pedagogical activity; educational activity; religion

Bazarov D.
The role of computer science in the complex of educational disciplines of the university on the example of “Kaliningrad State Technical University”
The article deals with the problem of modern education in the subject of informatics. An analysis is made of the influence of the level of knowledge of schoolchildren on academic performance at the Kaliningrad State Technical University. The importance of computer science in the complex of educational disciplines of the university is explained.
Keywords: informatics; EGE; propaedeutic; school; University; computer literacy; Information society

Kislitsyn A.
E-learning resources and experimental estimation of efficiency of their use
Electronic educational resources are firmly incorporated in the process of training and preparation, beginning in early childhood continue through life. They continue active integration with classical methods and ways of learning rapidly they complement and enrich, and often become an abstract entity of the modern educational system. The use of information technologies in the educational process of the military institution requires an evaluation of their effectiveness, the definition of positive and negative aspects, and most importantly the search for rational solutions to improve "efficiency". They must comply with the requirements regarding the methodology of training, technical equipment, novelty and relevance. To determine the effectiveness of using electronic learning resources, is proposed for experimental verification to justify the pedagogical appropriateness of their use, evaluation of learning outcomes of trainees. The article considers the methods of determination of efficiency of application of electronic educational resources, such as observation, questioning, conversation, pedagogical experiment. The role of the experts, the characteristics of electronic educational resources, which should be subjected to peer review and evaluation.
Keywords: electronic educational resources; experimental verification of the efficiency of the use; observation; questionnaires; specifications; the quality of education
