Independent work of a student: its forms and evolution
The authors share the experience of organizing the students' independent work as an interactive form of education in the process of forming professional competencies, managerial skills and intellectual culture of a modern student
Keywords: types and interactive forms of independent work of students; formation of skills of self-education and self-development; interdisciplinary project approach

Mychko E., Blazhenko А.
The research competence of the teacher in the paradigm modern education
Modern changes in the education system are analyzed. And as a result, the feasibility of developing a teacher's research competence to solve actual pedagogical problems is considered
Keywords: professional standard; national teacher growth system; research activities; pedagogical research competence

Kolesnichenko E., Radyukova Ya., Trufanova T.
Improvement of the personnel development system organizations based on requirements professional standards
The article is devoted to the development of personnel development directions of one of the largest telecommunications companies in the region. The development of personnel helps the organization to achieve a higher quality of accomplishment of set tasks, as well as increase in productivity growth and competitiveness. Therefore, employers should promote the personal and professional development of each employee of the company. To provide professional training in the system of staff development, the authors developed a "road map", which consists of five stages: the creation of a working group; development and approval of a work plan for the implementation of professional standards in the organization; implementation of activities approved by the plan for the implementation of professional standards, which consists of eight steps; summing up the work of the working group; development and approval of a work plan based on the results of the introduction of professional standards. In accordance with the road map, the authors have studied the professional standards of "cableman-spajshchik" and "specialist in personnel management". An analysis was carried out of the skills of ten people who hold the position of a cable driver in the company in accordance with the qualification requirements prescribed in the professional standard "cable driver", and four people holding the positions of HR-business partner, the head of the line and the leading specialist for compliance with qualification requirement, prescribed in the professional standard "specialist in personnel management." As a result, violations of the requirements of professional standards in terms of compliance with the education of the position were revealed. As a result, it is recommended to send employees who hold the position of a cable man-bonder to get an education in a university, a college so that they can correspond to the position held; employees of the personnel management department must be sent to refresher courses and refresher courses for updating existing knowledge, or for acquiring new ones
Keywords: personnel management, personnel development, professional standards

Studying loneliness, friendship, self-esteem of turkish young students using Facebook in high schools of the Azerbaijan republic
Youths' online friendship is extremely popular in social networks such as Facebook, You Tube, Linkedin, Twitter and so on while facebook has been being widely used by people of all age groups and demographics. This study is intended to examine Turkish schools’ students Facebook useage in high schools of the Azerbaijan Republic (Baku) in association with their psychological well-beings. This study focuses on five research questions: to what extend media have any influence on (1) loneliness, (2) friendship, and so (3) self-esteem in Turkish Young students using Facebook? (4) To what extend these influences are positive or negative? (5) What kind of relationship these influences have each other and how some? This study is conducted using a sample consisting of 340 high school students, ranged from 15 to 18 years old. The data was obtained from participants with Demographic Information, University of California Los Angeles Loneliness Scale, Rosenberg’s Self-Esteem Scale, Facebook usage questionnaire. Participants were asked to report how they were feeling while they using Facebook. Affect items included: loneliness, friendship, self-esteem. Data were analyzed through structural equation modeling to answer the five research questions. Our results indicate that self-esteem and friendship were positive related to used Facebook but loneliness did not have any association with used Facebook. There was a significantly positive correlation within the High School population between Facebook use and self-esteem; the higher students’ self-esteem, the more intensely they use Facebook.
There was a positive correlation between the relationships of Facebook intensity and the strategic way students used Facebook and students’ emotional adjustment in school. Students that were emotionally well adjusted in school used Facebook more intensely, and were strategic in how they used it. As a result, high school students had higher self-esteem than college students as well as a higher attachment score than college students in their adjustment to school. The results of this study provide both a theoretical understanding of psychological consequence of social networking use and inform better decision making and
implementation of educational practice and educational policy on Turkish high schools' students' social networking use
Keywords: Facebook, Self-Esteem, Friendship, Loneliness, High School students

The problem of interdisciplinary dialogue in education as a component part of teaching pedagogy
The best practices of pedagogical science confirm that teachers prepare to their lessons based on the requirements of the modern pedagogy when crossing the border of the studied discipline. In general, interdisciplinary integration and synthesis are connected with the innovative pedagogy, which recognizes the importance of active participation in the research process, taking into account the socio-cultural norms and values of learning at all stages. Teachers use innovative approaches that help scientists, teachers and students to collaborate through dialogue, identify and solve problems, and develop critical thinking.

Although the concept of dialogue has already become a popular one, its precise definition has not yet been found. Nevertheless, a new trend has already emerged and, based on it, almost all students have been more effectively engaged and acquired strategic changes through dialogue
Keywords: education; intersubject analysis; teaching pedagogy; training programs; the concept of dialogue

Choosing teaching as a career: research on pre-service teachers’ motivation
The success of educational change directly depends on the teachers’ competencies. Thus, the importance of employing highly qualified teachers in teaching is of great importance for the education system. Career choice is considered as a significant moment in the life of each person and is directly related to such factors as the attractiveness of the profession. Cognitive theories of motivation distinguish several main types of motives. A lot of research shows that if some students choose the teaching profession with altruistic-intrinsic or extrinsic reasons, other students choose it under the influence of others such as their parents, teacher or peers. This study aims to determine for what reasons student teachers choose teaching profession as a career
Keywords: higher education; teacher; career choice; the teaching profession; pre-service student; motivation; motive; extrinsic motive; intrinsic motive; altruistic motive

The beginning of learning physics in Albertine: the historical aspect of the formation of a physical education system at Koenigsberg University at the beginning of the XIX century
The article discusses the initial stages of the formation of the physical education system at the University of Koenigsberg at the beginning of the 19th century. The contribution of the physicist Franz Neumann to the world science, as well as to the formation of physical education in Albertina, is noted.

Keywords: Albertina; physical education; Franz Neumann

Korneva I.
Application of the theory of graphs in up-to-date logistic
Different practical applications of Theory of graphs in case of solving transport optimization problems were reviewed in this article. These tasks are applicable in student’s education from the speciality of "Management of water transporting and hydrographic maintains of shipping".

Keywords: weighted graph; network; weight function; Euler and Hamiltonian cycles; local optimal solution; optimization problems

Mukhina S., Skorobogatyh E.
On the development of a summary methodology Mathematical Olympiad in a Technical University
The article discusses issues related to the development of methods for summarizing the mathematical Olympiad in a technical University; describes the criteria for evaluating the decisions of Olympiad problems; proposed an algorithm for determining the results of the Olympiad.

Keywords: mathematical Olympiad; Olympiad problem; estimation technique
Tokmazov G.
Formation of generalized research skills in the process of studying mathematics
The technology of forming generalized research skills in the process of studying mathematics with general engineering training as a result of continuing education based on integral cognitive actions is presented
Keywords: formation; generalization; design; facilities; technology; research skills; integral actions; maths

Mojseenko S.
Methodological basis for the use of gaming imitation experiments in the formation of research readiness marine specialists
The questions of the methodology for the formation of research preparedness of marine specialists are considered. Two groups of research experiments are considered: decisive and exploratory. A classification of simulation models for conducting game simulation experiments with the aim of developing specialists' research readiness is proposed. A method for constructing a simulation model has been developed. An example of a structural scheme and a description of a simulation model of a transport and production logistics system are given. A diagram of the organization and planning of gaming simulation experiments aimed at shaping the research readiness of marine engineers is presented
Keywords: game simulation experiments; imitation games; transport-production systems; optimization; risk factors

Silina S., Novocеlov K.
Professional motivation of marine university students
This article discusses the theoretical aspects of both motivations in general and professional. The results of an empirical study of the professional motivation of students in BFFSA are presented
Keywords: motivation; students; higher education; research, questioning

Danilenkova V.
Features of the formation of environmental competence safety of students of the marine university
The quality of training a marine specialist depends on his level of competence in environmental safety, aimed at reducing accidents, risks, hazards, environmental pollution
Keywords: environmental safety; competence; environmental risk

Derendyaeva T.
Formation of readiness for professional self-improvement in the training of marine specialists
The article deals with the modern requirements for the profession of marine engineer, including not only knowledge, skills, but also professionally important qualities associated with the individual characteristics of the individual, formed in the process of professional self-improvement
Keywords: professionally important qualities of marine engineers; professional self-improvement; the individual characteristics of the individual; social and pedagogical problems; technical problems

Bazhenov V.
Possibility of using case-technologies for learning the basics information security
The possibility of using case technologies to study the basics of information security to improve the quality of education is being considered
Keywords: case technology; Information Security; protective measures; information
